

XMPro turns SharePoint from Good to GREAT

XMPro for SharePoint

What is the purpose of SharePoint in your organisation?
Is it a central place to collaborate, store documents, and find information?

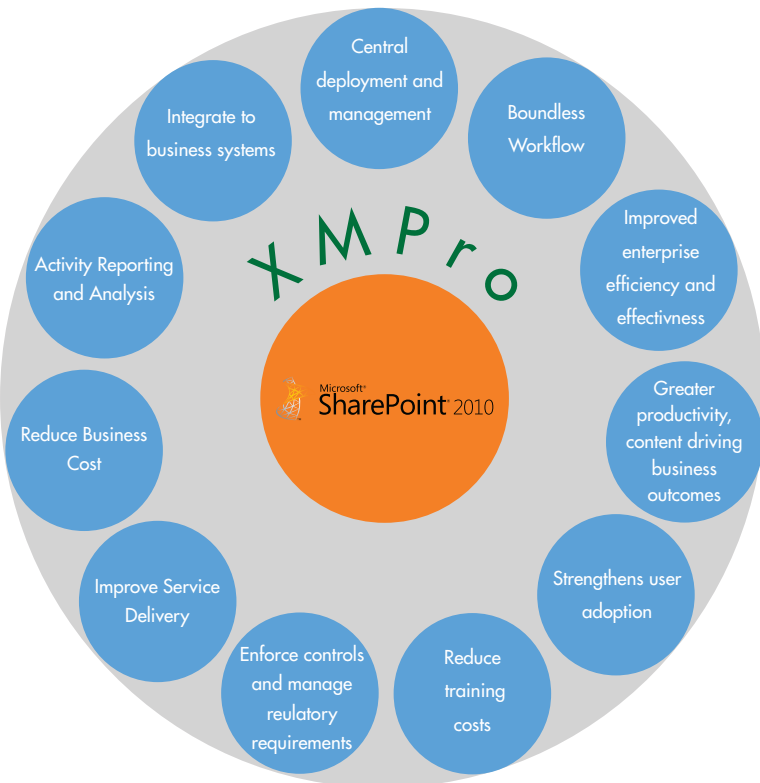

Do you want workflow to manage key business processes? Would you like to better leverage this powerful corporate repository?

XMPro turns your SharePoint investment from good to great!

Using XMPro provides boundless workflow and process management for SharePoint, orchestrating content and activities across your people and wider business systems. It reduces implementation time, business risk and enhances the process governance and security. It ensures SharePoint delivers consistent, repeatable, auditable and transparent processes across organisational and business boundaries.

XMPro focuses SharePoint on tangible business outcomes, increasing its utilisation, user productivity and content accuracy while driving down the cost of maintenance and compliance.

"It's fairly intuitive, [staff] only see what they want to and they only see what you expose them to, and they start it all off in a consistent way."

Recreational Services

"At Central Land Council the process improvements have certainly allowed us to be more efficient and have more certainty about where we're at."

Central Land Council

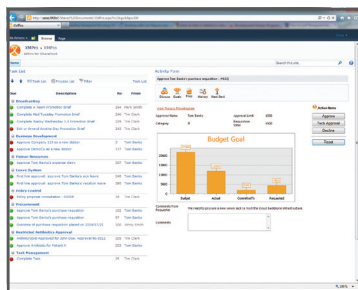

"I'd estimate that the new process has increased efficiency by 25% easily, although actual results are likely to be far higher."

Serco Sodexo Defence Services

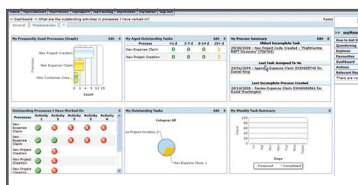

XMPro provides a central, managed repository for all SharePoint processes, rules, and application integration. It increases SharePoint's content integrity and relevance and eliminates the problem of duplicate data and documents.

XMPro allows your people to create, deploy, and monitor activities in SharePoint. Process logic and rules are configurable without the need for development.

XMPro makes for a richer SharePoint experience; it is not just about improving the life of the designer. Users and managers can interact with a range of interfaces – SharePoint, browser, Outlook, and Office. This accelerates participation and supports the different user needs, i.e. Sales Managers might use Windows Mobile or SMS to initiate an activity. It also increases productivity streaming tasks to users, ageing and escalating where needed, making content drive outcomes and work for your business.

XMPro even allows business users to continue to use processes in Microsoft Outlook or their favourite internet browser during SharePoint maintenance.

XMPro provides audit trails and tracking allowing you to drill down to associated details and attachments. So whether corporate and or legislative compliance, like OH&S, Environment and Quality Standards, you can enforce policies and also validate procedures.

XMPro allows you to define process performance metrics, evaluate current process performance and adjust processes to improve your SharePoint performance.

XMPro also enables you to build composite applications combining disparate functional islands to deliver a process in SharePoint. These could address a specific workflow need or deliver a whole value chain.

Typical Process Applications include

- Risk Management and Compliance
- Occupational, Health and Safety
- Loan Application and Approval
- Procurement and Supply Chain
- Contract Management
- Facilities and Support Services

Features

- MS Visio based process designer
