# Modern Baseline Security

Foundational modern IT security strategy for small to medium businesses.

professional advantage

Implementing a firewall and anti-virus are no longer sufficient in today's IT security landscape. Cyberthreats are becoming more advanced and persistent, and have been targeting small to medium-sized organisations more now than ever before. A business cannot afford to lose their customer's trust, for their reputation to be damaged, or to suffer prolonged operational disruption as a result of a security breach.

A modernised IT security strategy will help you to minimise security risks across your Hybrid Cloud Infrastructure and respond to ever-evolving cyber threats using Office 365 Modern Baseline Security.

Office 365 Modern Baseline Security

This security service equips your business with a foundational strategy to identify and protect against cyber threats in your Hybrid Cloud Infrastructure. This solution combines the Top Four recommended security frameworks by the Australian Signals Directorate (ASD) and the built-in security optimisation features of Office 365 Security and Compliance Center.

The Office 365 Modern Baseline Security helps you to minimise risks related to:

1. Ransomware and crypto locker incidents.
2. Security incidents from privileged internal credentials.
3. Data breaches of sensitive and confidential information.
4. Security loopholes within your network or servers.

Key Benefits

Our Modern Baseline Security helps small to medium businesses to effectively:

1. Prevent unauthorised applications from installing or running on your PC.
2. Remove vulnerabilities by reviewing application and OS patching procedures.
3. Review and restrict administrative privileges to 'least privilege' requirements only.
4. Protect emails against unknown malware, viruses, and harmful links.
5. Safeguard accounts with multi-factor authentication, data loss prevention, audit logging, retention policies, and more.

Service Components

Application Whitelisting

Application Patching

Mail Forwarding

Retention Policies

Audit Logging

Malware Protection

Multi-Factor Authentication

Operating System Patching

Restriction of Administrative Privilege

Basic Server and Network Audit

Client Environment Audit

The Professional Advantage Difference

We have over 20 years of experience in delivering cloud and infrastructure solutions to our clients. Our strength relies on these three core pillars:

- **Established and proven framework for security service delivery.**
  Our framework for delivering our security services is based on the recommended and proven strategies from the Australian Signals Directorate (ASD) and the National Institute of Standards and Technology (NIST).

- **Experienced and hands-on security specialists.**
  Our team of senior security professionals are experts in their field with years of hands-on experience in assessing cybersecurity risks; implementing security solutions; and diffusing and responding to security incidences.

- **Proactive remote monitoring and security management.**
  We have a dedicated team of support engineers who follow established response and escalation procedures and use best in class remote monitoring and security management software.
