

# Microsoft Azure Virtual Desktop

Understanding the virtual environment.

As organisations become more complex, users need change. They might work...

on specific tasks

from a remote location

a flexible schedule

as independent contractors

from their own devices

Wherever they are...

and whatever device they use...

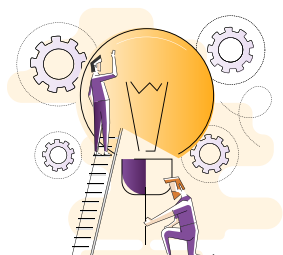

they have access to the apps they need...

to keep them connected to each other...

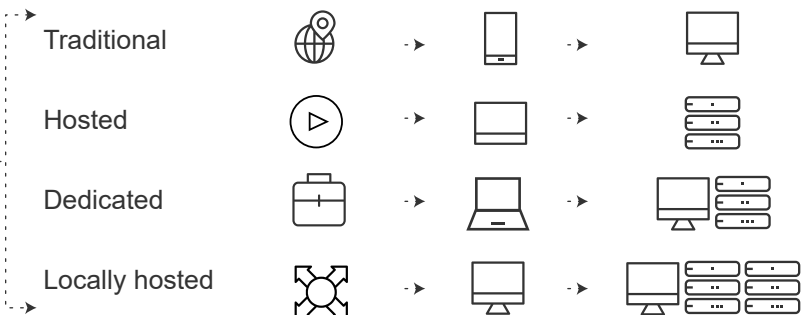

and to the information they need...

to keep them productive.

With diverse devices and a disparate workforce, it's sometimes safer to separate applications from device. Matching workstyles, devices, and platforms can be confusing.

Getting the right combination will benefit the wider organisation...

Workstyle corridor

Device tablet

Platform shared hosted

Employees

IT

Business

Not only will a virtualised desktop environment enable users, it can also...

cater for disaster recovery scenarios

support flexible working

provide security and control

facilitate enterprise modality

resulting in

reduced costs

reduced risks

business change

flexibility and agility

user satisfaction

Let's talk
