

# Essential Eight Discovery Session

## Get an indication of your organisation's Essential Eight maturity level.

We live in an era where cyber threats are continuously evolving and harder to detect. Hence, businesses must have a foundational cyber security strategy to prevent malware delivery and limit the impact of cyber security attacks. A good way to do this is to evaluate the maturity of your IT security against Essential Eight, a baseline risk mitigation strategy with the following controls:

- Application Control
- Patch Applications
- Configure Microsoft Office Macro Settings
- User Application Hardening
- Restrict Administrative Privileges
- Patch Operating Systems
- Multi-Factor Authentication (MFA)
- Daily Backups

Running an Essential Eight Discovery Session will help you understand how to reduce your cyber security risks dramatically and determine what steps to take to improve your security posture. We will work with you to assess your current systems and evaluate whether they are aligned with the Essential Eight maturity model.
