

Microsoft Sentinel:

A security information and event management (SIEM) with built-in generative AI

What's Security Copilot?

Security Copilot is your purpose-built generative AI assistant for security and IT operations. Watch the video to learn more!

How does Security Copilot empower Microsoft Sentinel users?

Security Copilot can dramatically streamline the process of information gathering and identifying, finding, and resolving threats—many of the tasks that take up far too much time of your security team. You can use it for:

Reverse engineering of scripts
Say goodbye to the need to reverse engineer malware. Plus, Security Copilot analyses complex command line scripts and translates them into natural language.

Guided responses
Respond to threats faster when you get actionable, step-by-step guidance for what to do, including directions for triage, investigation, containment, and remediation.

14% faster at analysing scripts

19% faster at analysing incident responses

Incident summaries
Swiftly distill complex security alerts into concise, actionable summaries—and speed response times.

Impact analysis
Easily assess the potential impact of security incidents by using AI-driven analytics.

39% faster at summarising incidents

How do I get started with Security Copilot in Microsoft Sentinel?

Professional Advantage wants to help you modernise your SIEM and help you get the right tools in front of your security operations center (SOC). We'd love to show you how a comprehensive approach to security can help mitigate threats. As a Microsoft partner with Security specialisation, we are uniquely qualified to help you start taking advantage of both Microsoft Sentinel and Security Copilot.

Let's put Security Copilot to work in your SOC

Professional Advantage can help you accelerate your security operations modernisation project through our unique service offering.
