Break Down Silos in Construction

Unify your teams, tools, and timelines with a central hub built on SharePoint.

Construction projects suffer from disconnected teams and scattered information, which results in delays, rework, frustrated teams, and cost overruns. **Microsoft SharePoint eliminates silos by uniting your construction workforce, projects, and plans in a single platform.**

Construction teams thrive when everyone works from the same platform

Construction Project Managers
Stay connected with real-time visibility across all teams and phases.

Field Crews
Receive instant updates and critical information wherever they are.

Architects and engineers
Collaborate seamlessly with plans and documents in one centralised, accessible location.

Subcontractors
Gain complete transparency and access to project information.

Office Staff
Reduce the time spent organising, retrieving, and updating documents, improving overall efficiency.

The Connected Job Site with Microsoft SharePoint

Tailored for the construction industry, SharePoint becomes a powerful platform for uniting:

Projects
- Real-time project dashboards.
- Centralised document management.
- Progress tracking across all phases.
- Budget and timeline visibility.

People
- Team collaboration spaces.
- Role-based access and permissions.
- Communication tools that connect the office to the field.
- Vendor and subcontractor integration.

Plans
- Live document version control.
- Blueprint and specification management.
- Change order tracking.
- Document collaboration tools.

Ready to eliminate silos in your construction projects?

Discover how SharePoint and Professional Advantage transform construction collaboration. As a Microsoft Partner with proven results in the industry, we help you connect your crews, streamline documents, and stay secure and compliant every step of the way.
